★ *Program, summary*

# This is your Europe!

The countries making up the European Union can no longer face the challenges of the 21st century alone. The program of the European Federalist Party provides a response to this situation.

## **Objective 1: Build a democracy with 500 million inhabitants.**

A democracy where the decision belongs to the citizens with a directly elected European Parliament and a government responsible to this Parliament. This democracy will guarantee the well-being of European citizens, social justice, individual freedoms, quality of life and security for all. It will respect the diversity of cultures and languages of the countries that compose it.

We are proposing a Constitution readable to all which will replace the complexity of existing treaties: it will guarantee the essential rights of citizens. Parliament will be made up of two chambers: one composed of deputies representing citizens and the other representing member states.

The Constitution will define attributions at the local, national and federal level, favoring proximity with citizens as much as possible.

European citizens must be involved in the drafting of this constitution. The Federal Constitution will have to be the subject of a European referendum, taking place simultaneously in each country according to a single procedure.

It will be considered adopted in countries where the majority of voters have voted in favor of it by bringing together a third of the voters having the right to vote.

## **Objective 2: Build a dynamic economy for the employment of Europeans.**

We need a single European labor market by converging the recognition of professional qualifications and social protection systems (family, health, retirement, etc.).

We must encourage small and medium-sized businesses by allowing them to evolve on the European market and be present in exports with the help of federal financial institutions.

For European industry, we must preserve strategic sectors which must be supported by a policy defined at federal level, while respecting the principles of free competition.

In global economic competition, Europe will ensure compliance with standards concerning safety, working conditions, respect for human rights and the principles of social justice in order to exclude any unfair competition.

## **Goal 3: Ensure social justice for all.**

Having the guarantee of the best level of social protection is a legitimate expectation of European citizens in the face of the development of the globalized economy.

A federal budget must allow solidarity to deal with economic accidents and maintain territorial cohesion. It will play the role of stabilizer through a European system of unemployment compensation or an "unconditional basic income" for all.

## **Objective 4: Promotion of a European quality of life.**

Guarantee the possibility of access for every European citizen to a high level of education.

Promote mutual recognition of diplomas and exchanges of students and pupils  
 Manage access to energy resources and make energy available to citizens at a bearable cost, promote research and innovation.  
 Have a European policy of cooperation and exchange of good practices in environmental protection.

## **Objective 5: Security in Europe.**

Europe's influence has weakened and cannot be heard when it comes to the armed conflicts that are shaking the world. The same goes for trade conflicts, climate change, the international financial crisis, tax evasion. Only Federal Europe can make a contribution to resolving these problems.

We need a common foreign policy, a common defense and security policy; a single army, a centralized command and a single intelligence service. A federal police force will fight crimes such as terrorism, organized crime, human trafficking and international tax evasion. The Federation will seek a seat on the UN Security Council, the WTO and the World Bank.

An immigration policy must be defined: control by federal border police, common rules on immigration, but also a humanist reception policy respecting the right to asylum, the responsibility of which must be assumed at the level federal; at the same time, it is necessary to develop a policy of cooperation with source countries of immigration.

## **Goal 6: Establish healthy finances.**

Only a federal government will be able to define a policy of economic growth and ensure the stability and prosperity of Europe.

A European budget with its own resources (such as a tax on financial transactions, a federal VAT, etc.) will be able to finance environmental, industrial, research and transport infrastructure policies. Harmonization and simplification of taxation must be sought. A banking union will be set up, playing the role of regulator.

The ECB must issue the currency, promote growth by controlling inflation and ensure that low interest rates benefit citizens.

## **Objective 7: A community of European citizens rich in its diversity.**

**Objective 7: A community of European citizens rich in its diversity.**

A European nationality will be created. Thus, the right to vote and stand as a candidate will be granted to European citizens for all elections in the Member State in which they reside.

The diversity of languages will be recognized and the teaching of several languages will be encouraged: the various administrative documents of the Member States will be available in an English translation.

Exchanges of all kinds between citizens of Member States will be developed. A European radio and television station will be created.

A European political party status will be defined to allow direct expression of citizens on European problems.
